

Your original images from your folders or from iPhoto will not be affected during the process of converting.

How to use Watermark FX:

1. Drag and drop your images onto the working area of the app window. Alternatively, use "Import images" button (⌘O) to import images into Watermark FX.
2. Select the image thumbnail to preview watermark text, lines and logo in the working area of the app window. In addition, take advantage of a handy zoom in/out slider available in the bottom bar.
3. App settings are saved by default with "Save format" checkbox located at the bottom of the Format menu. Next time the app will start with the same preferences if you leave "Save format" checkbox checked.
4. Menu to change Filenames and image size:
 - 4.1 Select "Leave current names" to convert your images without changing the file names.
 - 4.2 Select "Change current names" to enter a new name for your images in the text box. The converter will change the names of all your images. The order number will appear next to the names as well.
 - 4.3 Select "Add text to current names" to add extra text at the end of the existing file names. Enter additional text for your images in the text box.
 - 4.4 Select "Change size in pixels" checkbox and enter width or height to change the size of all your images. Only one dimension can be changed at a time in order to constrain the proportions of the images.
 - 4.5 Green light next to "Filenames and size" menu indicates that the feature is enabled.

5. Add logo menu:
 - 5.1 Select “Enable logo” checkbox, if it is not selected, and choose your image to add the logo to all your images. Alternatively, drag and drop your logo image onto the logo preview area.
 - 5.2 Adjust opacity and select size and position for your logo.
 - 5.3 Green light next to "Add logo" menu indicates that the feature is enabled.
6. Add watermark text menu:
 - 6.1 Select “Enable text” checkbox, if it is not selected, and enter the text in the text box to add watermark text to all your images.
 - 6.2 Adjust opacity, select size, color, font and position of the text on your images.
 - 6.3 Green light next to "Add watermark text" menu indicates that the feature is enabled.
7. Add watermark lines menu:
 - 7.1 Select “Enable lines” checkbox, if it is not selected, and choose one of the templates to add waterlines to all your images. Alternatively, just select the template straight away and this will enable the feature.
 - 7.2 Adjust opacity and select color of waterlines.
 - 7.3 Green light next to "Add watermark lines" menu indicates that the feature is enabled.
8. Choose format for your images and click “Convert” to start the conversion of your images.
9. The conversion time depends on the number of imported images and enabled features. Progress bar is available in the pop-up window. You can cancel the conversion process at any time by clicking “Cancel” button. You will be notified by a pop-up window when the conversion is completed.
10. Click “Show in Finder” to open the folder with all the converted images. Even if the conversion was canceled, some images can still be converted and it is advised to check the output folder.
11. Full Screen button (^⌘F) is available at the top right corner of the application window. “Empty” button at the bottom right corner of the application window removes all the images from the application.
